Internet and Digital Safety

understanding and managing risks

Empowering teachers to safely utilise ICT within their centres

Education providers are rapidly discovering the potential benefits technologies such as the Internet, email and digital photography bring to children's learning and development. It is easy to forget that using these technologies, particularly in the presence of young children creates a responsibility to carefully manage the associated risks (Netsafe, 2006).

Considerations

- How is your centre addressing the safe and responsible use of ICTs and digital material?
- How well do your staff and colleagues understand and implement cybersafe practices?
- How well are you managing and protecting electronic information?

Cybersafety workshops can include:

- Internet and digital use - risks and management
- Development of policies and procedures
- Electronic security
- Educating young children to be cybersafe
- Responding to incidents
- Legal responsibilities
- Educating families on cybersafety

We can provide individualised professional learning programmes and packages to suit your requirements.

Teacher quote: "This workshop opened my eyes to an area of my teaching I really hadn't given much thought to. The facilitator provided an array of ways I can now positively and safely support the children in our centre to make the most of being a 21st Century learner and explorer."

Anzena (Nenah) Wano - Rotorua Girls' High School Childcare Trust

CORE Education Ltd : CORE Education is a not-for-profit educational research and development based organisation with an international reputation for the support and promotion of curriculum reform, educational leadership, and the use of new technologies for learning across all education and training sectors.
